

IT IS TIME TO HERALD THE NEW AGE OF ELECTRIC HEATING.

ECOLEC are leaders in this field, and are proud to announce an addition to their well known selection of panel heaters.

We now present a 43°C low surface temperature panel heater range for such applications required by UK Health and Safety Executive

The system uses state of the art technology for precise 43°C surface temperature control, therefore no guards are necessary.

A programmable room thermostat is available which allows setting interrogation and air temperature adjustments using a smartphone either locally or remotely via the internet.

RADIATOR SURFACE TEMPERATURE RANGE: 43°C

SAFE TO TOUCH AT 43°C AS ADVISED BY THE HEALTH & SAFETY EXECUTIVE SUITABLE FOR BATHROOM USE

Wireless Thermostat Range 30m

MZ-01

The Ecolec Care thermostat has a unique usability factor, where the patient does not interact with the controller and relies on the manager of the site to interact by smart phone.
