

# ECOLEC WIRELESS SMART THERMOSTAT

Take control of your energy savings

## CASE STUDY:

### Ecolec Installation - what a customer says

**Robert Page** says;

"Having decided to refurbish and redecorate our apartment we wanted to look into modernising as much as possible.

Regarding the heating we were happy to stay with an electric system which is commonplace in modern apartments nowadays. The original developer had installed an Ecolec panel system in a very random way, so we started with re-positioning these more sensibly, under windows etc plus we added a couple to ensure maximum comfort.

Making contact with Ecolec made us aware of a new wireless range they were just introducing to the market. I was fairly new to this sort of technology, but soon did some research to understand what is generally available. There are a number of companies that offer a very expensive/complicated all-inclusive packages. (Lighting, curtains doors, security etc). This was not what I wanted!

**The Ecolec package is simple, all you do is plug their gateway into your broadband router and pair up the thermostats with the radiators and link this to the website they supply.** You will need to pay attention to the instructions when pairing, but once you have done one its simple. (A bit like building an Ikea wardrobe then reading the instructions afterwards).

**What's good about it? The simple answer is absolute control!** The apartment is three bedrooms with two bathrooms. Initially we were going to have six zones with the master bedroom and en-suite being together, but it soon

became obvious that to have maximum control we needed to separate these. Therefore with seven zones every room can be controlled independently.

Every family will be different; my wife goes out to work, I work from home and we have a daughter who has returned to the fold and keeps unusual hours as they do. The heating system easily copes with this as each space can have its individual temperature and timer controls. For example when I work at home I simply heat the area I work in and have other rooms at a lower temperature.

**All controlled in our case from iPad or a PC.** When we are away or on holiday the apartment can be set to 'away' mode by just setting a low temperature so nothing freezes. In our case when on our way back an hour or so before we arrive it can all be switched on again so the apartment is up to temperature on arrival.

For those who are a bit more technically minded when using this system on multiple devices there is no need to upload your settings to a central server; this is necessary with some other competitors, causing much frustration if you forget!"

Operators of a small 10 bedroom hotel must be able to control the temperature of a hotel bedroom remotely from outside the bedroom so that they can optimise on heating levels according to whether the room is occupied or not.

Simply log in to your home/office **ecolec** smart heating system via the internet to check the air temperature in any zone/room and make the changes necessary. Other manufacturers do not provide as much flexibility.

#### Ecolec Multiple Zone enables you to:

- Control temperature and heating in up to 10 different zones
- Set up custom 7 day programmes to suit any requirement
- Operate the system from a computer, tablet or mobile phone

#### Ecolec Multiple Zone Benefits:

- Complete heating control
- Energy & cost saving
- Easy to use & programme
- Easy upgrade to existing products
